## **THEOSOPHY GENERALLY STATED**

[From the Official Report, World's Parliament of Religions]

**T**HE claim is made that an impartial study of history, religion and literature will show the existence from ancient times of a great body of philosophical, scientific and ethical doctrine forming the basis and origin of all similar thought in modern systems. It is at once religious and scientific, asserting that religion and science should never be separated. It puts forward sublime religious and ideal teachings, but at the same time shows that all of it can be demonstrated to reason, and that authority other than that has no place, thus preventing the hypocrisy which arises from asserting dogmas on authority which no one can show as resting on reason. This ancient body of doctrine is known as the "Wisdom Religion" and was always taught by adepts or initiates therein who preserve it through all time. Hence, and from other doctrines demonstrated, it is shown that man, being spirit and immortal, is able to perpetuate his real life and consciousness, and has done so during all time in the persons of those higher flowers of the human race who are members of an ancient and high brotherhood who concern themselves with the soul development of man, held by them to include every process of evolution on all planes. The initiates, being bound by the law of evolution, must work with humanity as its development permits. Therefore from time to time they give out again and again the same doctrine which from time to time grows obscured in various nations and places. This is the wisdom religion, and they are the keepers of it. At times they come to nations as great teachers and "saviours," who only re-promulgate the old truths and system of ethics. This therefore holds that humanity is capable of infinite perfection both in time and quality, the saviours

and adepts being held up as examples of that possibility.

From this living and presently acting body of perfected men H. P. Blavatsky declared she received the impulse to once more bring forward the old ideas, and from them also received several keys to ancient and modern doctrines that had been lost during modern struggles toward civilization, and also that she was furnished by them with some doctrines really ancient but entirely new to the present day in any exoteric shape. These she wrote among the other keys furnished by her to her fellow members and the world at large. Added, then, to the testimony through all time found in records of all nations we have this modern explicit assertion that the ancient learned and humanitarian body of adepts still exists on this earth and takes an interest in the development of the race.

Theosophy postulates an eternal principle called the unknown, which can never be cognized except through its manifestations. This eternal principle is in and is every thing and being; it periodically and eternally manifests itself and recedes again from manifestation. In this ebb and flow evolution proceeds and itself is the progress of the manifestation. The perceived universe is the manifestation of this unknown, including spirit and matter, for Theosophy holds that those are but the two opposite poles of the one unknown principle. They coexist, are not separate nor separable from each other, or, as the Hindu scriptures say, there is no particle of matter without spirit, and no particle of spirit without matter. In manifesting itself the spirit-matter differentiates on seven planes, each more dense on the way down to the plane of our senses than its predecessor, the substance in all being the same, only differing in degree. Therefore from this view the whole universe is alive, not one atom of it being in any sense dead. It is also conscious and intelligent, its consciousness and intelligence being present on all planes though obscured on this one. On this plane of ours the spirit focalizes itself in all human beings who choose to permit it to do so, and the refusal to permit it is the cause of ignorance, of sin, of all sorrow and suffering. In all ages some have come to this high state, have grown to be as gods, are partakers actively in the work of nature, and go on from century to century

widening their consciousness and increasing the scope of their government in nature. This is the destiny of all beings, and hence at the outset Theosophy postulates this perfectibility of the race, removes the idea of innate unregenerable wickedness, and offers a purpose and an aim for life which is consonant with the longings of the soul and with its real nature, tending at the same time to destroy pessimism with its companion, despair.

In Theosophy the world is held to be the product of the evolution of the principle spoken of from the very lowest first forms of life guided as it proceeded by intelligent perfected beings from other and older evolutions, and compounded also of the egos or individual spirits for and by whom it emanates. Hence man as we know him is held to be a conscious spirit^ the flower of evolution, with other and lower classes of egos below him in the lower kingdoms, all however coming up and destined one day to be on the same human stage as we now are, we then being higher still. Man's consciousness being thus more perfect is able to pass from one to another of the planes of differentiation mentioned. If he mistakes any one of them for the reality that he is in his essence, he is deluded; the object of evolution then is to give him complete self-consciousness so that he may go on to higher stages in the progress of the universe. His evolution after coming on the human stage is for the getting of experience, and in order to so raise up and purify the various planes of matter with which he has to do, that the voice of the spirit may be fully heard and comprehended.

He is a religious being because he is a spirit encased in matter, which is in turn itself spiritual in essence. Being a spirit he requires vehicles with which to come in touch with all the planes of nature included in evolution, and it is these vehicles that make of him an intricate, composite being, liable to error, but at the same time able to rise above all delusions and conquer the highest place. He is in miniature the universe, for he is as spirit, manifesting himself to himself by means of seven differentiations. Therefore is he known in Theosophy as, a 3Pvenfold being. The Christian division of body, soul, and spirit is accurate so far as it goes, but will not answer to the problems of life and nature, unless, as is not the case,

those three divisions are each held to be composed of others, which would raise the possible total to seven. The spirit stands alone at the top, next comes the spiritual soul or Buddhi as it is called in Sanskrit. This partakes more of the spirit than any below it, and is connected with Manas or mind, these three being the real trinity of man, the imperishable part, the real thinking entity living on the earth in the other and denser vehicles by its evolution. Below in order of quality is the plane of the desires and passions shared with the animal kingdom, unintelligent, and the producer of ignorance flowing from delusion. It is distinct from the will and judgment, and must therefore be given its own place. On this plane is gross life, manifesting, not as spirit from which it derives its essence, but as energy and motion on this plane. It being common to the whole objective plane and being everywhere, is also to be classed by itself, the portion used by man being given up at the death of the body. Then last, before the objective body, is the model or double of the outer physical case. This double is the astral body belonging to the astral plane of matter, not so dense as physical molecules, but more tenuous and much stronger, as well as lasting. It is the original of the body permitting the physical molecules to arrange and show themselves thereon, allowing them to go and come from day to day as they are known to do, yet ever retaining the fixed shape and contour given by the astral double within. These lower four principles or sheaths are the transitory perishable part of man, not himself, but in every sense the instrument he uses, given up at the hour of death like an old garment, and rebuilt out of the general reservoir at every new birth. The trinity is the real man, the thinker, the individuality that passes from house to house, gaining experience at each rebirth, while it suffers and enjoys according to its deeds—it is the one central man, the living spirit-soul.

Now this spiritual man, having always existed, being intimately concerned in evolution, dominated by the law of cause and effect, because in himself he is that very law, showing moreover on this plane varieties of force of character, capacity, and opportunity, his very presence must be explained, while the differences noted have to

be accounted for. The doctrine of reincarnation does all this. It means that man as a thinker, composed of soul, mind and spirit, occupies body after body in life after life on the earth which is the scene of his evolution, and where he must, under the very laws of his being, complete that evolution, once it has been begun. In any one life he is known to others as a personality, but in the whole stretch of eternity he is one individual, feeling in himself an identity not dependent on name, form, or recollection.

This doctrine is the very base of Theosophy, for it explains life and nature. It is one aspect of evolution, for as it is re-embodiment in meaning, and as evolution could not go on without re-embodiment, it is evolution itself, as applied to the human soul. But it is also a doctrine believed in at the time given to Jesus and taught in the early ages of Christianity, being now as much necessary to that religion as it is to any other to explain texts, to reconcile the justice of God with the rough and merciless aspect of nature and life to most mortals, and to throw a light perceptible by reason on all the problems that vex us in our journey through this world. The vast, and under any other doctrine unjust, difference between the savage and the civilized man as to both capacity, character, and opportunity can be understood only through this doctrine, and coming to our own stratum the differences of the same kind may only thus be explained. It vindicates Nature and God, and removes from religion the blot thrown by men who have postulated creeds which paint the creator as a demon. Each man's life and character are the outcome of his previous lives and thoughts. Each is his own judge, his own executioner, for it is his own hand that forges the weapon which works for his punishment, and each by his own life reaches reward, rises to heights of knowledge and power for the good of all who may be left behind him. Nothing is left to chance, favour, or partiality, but all is under the governance of law. Man is a thinker, and by his thoughts he makes the causes for woe or bliss; for his thoughts produce his acts. He is the centre for any disturbance of the universal harmony, and to him as the centre the disturbance must return so as to bring about equilibrium, for nature always works towards harmony. Man is always carrying on a series of thoughts,

which extend back to the remote past, continually making action and reaction. He is thus responsible for all his thoughts and acts, and in that his complete responsibility is established; his own spirit is the essence of this law and provides for ever compensation for every disturbance and adjustment for all effects. This is the law of Karma or justice, sometimes called the ethical law of causation. It is not foreign to the Christian scriptures, for both Jesus and St. Paul clearly enunciated it. Jesus said we should be judged as we gave judgment and should receive the measure meted to others. St. Paul said: "Brethren, be not deceived, God is not mocked, for whatsoever a man soweth that also shall he reap." And that sowing and reaping can only be possible under the doctrines of Karma and reincarnation.

But what of death and after? Is heaven a place or is it not? Theosophy teaches, as may be found in all sacred books, that after death the soul reaps a rest. This is from its own nature. It is a thinker, and cannot during life fulfil and carry out all nor even a small part of the myriads of thoughts entertained. Hence when at death it casts off the body and the astral body, and is released from the passions and desires, its natural forces have immediate sway and it thinks its thoughts out on the soul plane, clothed in a finer body suitable to that existence. This is called Devachan. It is the very state that has brought about the descriptions of heaven common to all religions, but this doctrine is very clearly put in the Buddhist and Hindu religions. It is a time of rest, because the physical body being absent the consciousness is not in the completer touch with visible nature which is possible on the material plane. But it is a real existence, and no more illusionary than earth life; it is where the essence of the thoughts of life that were as high as character permitted, expands and is garnered by the soul and mind. When the force of these thoughts is fully exhausted the soul is drawn back once more to earth, to that environment which is sufficiently like unto itself to give it the proper further evolution. This alternation from state to state goes on until the being rises from repeated experiences above ignorance, and realizes in itself the actual unity of all spiritual beings. Then it passes on to higher and greater steps on the evolutionary road.

No new ethics are presented by Theosophy, as it is held that right ethics are for ever the same. But in the doctrines of Theosophy are to be found the philosophical and reasonable basis for ethics and the natural enforcement of them in practice. Universal brotherhood is that which will result in doing unto others as you would have them do unto you, and in your loving your neighbour as yourself—declared as right by all teachers in the great religions of the world.

## THE APPLICATION OF THEOSOPHICAL THEORIES

THE mistake is being made by a great many persons, among them being Theosophists, of applying several of the doctrines current in Theosophical literature, to only one or two phases of a question or to only one thing at a time, limiting rules which have universal application to a few cases, when in fact all those doctrines which have been current in the East for so long a time should be universally applied. For instance, take the law of Karma. Some people say, “y<sup>es</sup> we believe in that,” but they only apply it to human beings. They consider it only in its relation to their own acts or to the acts of all men. Sometimes they fail to see that it has its effect not only on themselves and their fellows, but as well on the greatest of Mahatmas. Those great Beings are not exempt from it; in fact they are, so to say, more bound by it than we are. Although they are said to be *above Karma*, this is only to be taken to mean that, having escaped from the wheel of Samsara (which means the wheel of life and death, or rebirths), and in that sense are above Karma, at the same time we will find them often unable to act in a given case. Why? If they have transcended Karma, how can it be possible that in any instance they may not break the law, or perform certain acts which to us seem to be proper at just that juncture? Why can they not, say in the case of a chela who has worked for them and for the cause, for years with the most exalted unselfishness, interfere and save him from suddenly falling or being overwhelmed by horrible misfortune; or interfere to help or direct a movement? It is because they have become part of the great law of Karma itself. It would be impossible for them to lift a finger. Again, we know that at a certain period of progress, far above this sublunary world, the adept reaches

a point when he may, if he so chooses, formulate a wish that he might be one of the *Devas*, one of that bright host of beings of whose pleasure, glory and power we can have no idea. The mere formulation of the wish is enough. At that moment he becomes one of the *Devas*. He then for a period of time which in its extent is incalculable, enjoys that condition—then what? Then he has to begin again low down in the scale, in a mode and for a purpose which it would be useless to detail here, because it could not be understood, and also because I am not able to put it in any language with which I am conversant. In this, then, is not this particular adept who thus fell, subject to the law of Karma?

There is in the Hindoo books a pretty story which illustrates this. A certain man heard that every day a most beautiful woman rose up out of the sea, and combed her hair. He resolved that he would go to see her. He went, and she rose up as usual. He sprang into the sea *behind her*, and with her went down to her abode. There he lived with her for a vast length of time. One day she said she had to go away and stated that he must not touch a picture which was on the wall, and then departed. In a few days, fired by curiosity, he went to look at the picture; saw that it was an enameled one of a most ravishingly beautiful person, and he put out his hand to touch it. At that moment the foot of the figure suddenly enlarged, flew out from the frame, and sent him back to the scenes of earth, where he met with only sorrow and trouble.

The law of Karma must be applied to everything. Nothing is exempt from it. It rules the vital molecule from plant up to Brahma himself. Apply it then to the vegetable, animal and human kingdom alike.

Another law is that of Reincarnation. This is not to be confined only to the souls and bodies of men. Why not use it for every branch of nature to which it may be applicable? Not only are we, men and women, reincarnated, but also every molecule of which our bodies are composed. In what way, then, can we connect this rule with all of our thoughts? Does it apply there? It seems to me that it does, and with as much force as anywhere. Each thought is of definite length.

It does not last for over what we may call an instant, but the time of its duration is in fact much shorter. It springs into life and then it dies; but it is at once reborn in the form of another thought. And thus the process goes on from moment to moment, from hour to hour, from day to day. And each one of these reincarnated thoughts lives its life, some good, some bad, some so terrible in their nature that if we could see them we would shrink back in affright. Further than that, a number of these thoughts form themselves into a certain idea, and it dies **to** be reincarnated in its time. Thus on rolls this vast flood. **Will it** overwhelm us? **It** may; **it** often does. Let us then make **our thoughts pure. Our** thoughts are the matrix, the mine, the **fountain, the** source of all that we are and of all that we may be.

## UNIVERSAL APPLICATIONS OF DOCTRINE

**D**URING the last few years in which so much writing has been done in the theosophical field of effort, a failure to make broad or universal applications of the doctrines brought forward can be noticed. With the exception of H. P. Blavatsky, our writers have confined themselves to narrow views, chiefly as to the state of man after death or how Karma affects him in life. As to the latter law, the greatest consideration has been devoted to deciding how it modifies our pleasure or our pain, and then as to whether in Devachan there will be compensation for failures of Karma; while others write upon reincarnation as if only mankind were subject to that law. And the same limited treatment is adopted in treating of or practising many other theories and doctrines of the Wisdom Religion. After fourteen years of activity it is now time that the members of our society should make universal the application of each and every admitted doctrine or precept, and not confine them to their own selfish selves.

In order to make my meaning clear I purpose in this paper to attempt an outline of how such universal applications of some of our doctrines should be made.

Before taking up any of these I would draw the attention of those who believe in the *Upanishads* to the constant insistence throughout those sacred books upon the identity of man with Brahma, or God, or nature, and to the universal application of all doctrines or laws.

In *Brihadaranyaka Upanishad*<sup>1</sup> it is said:

Tell me the Brahman which is visible, not invisible, the *atman* who is within all?

<sup>1</sup> I I I Adh., 4th Brah.

This, thy Self who is within all. ... He who breathes in the up-breathing, he is thy Self and within all. He who breathes in the down-breathing, he is thy Self and within all. He who breathes in the on-breathing, he is thy Self and within all. This is thy Self who is within all.

The 6th Brahmana is devoted to showing that all the worlds are woven in and within each other; and in the 7th the teacher declares that “the puller” or mover in all things whatsoever is the same Self which is in each man.

The questioners then proceed and draw forth the statement that “what is above the heavens, beneath the earth, embracing heaven and earth, past, present, and future, that is woven, like warp and woof, in the ether,” and that the ether is “woven like warp and woof in the Imperishable.” If this be so, then any law that affects man must govern every portion of the universe in which he lives.

And we find these sturdy men of old applying their doctrines in every direction. They use the laws of analogy and correspondences to solve deep questions. Why need we be behind them? If the entire great Self dwells in man, the body in all its parts must symbolize the greater world about. So we discover that space having sound as its distinguishing characteristic is figured in the human frame by the ear, as fire is by the eye, and, again, the eye showing forth the soul, for the soul alone conquers death, and that which in the *Upanishads* conquers death is fire.

It is possible in this manner to proceed steadily toward the acquirement of a knowledge of the laws of nature, not only those that are recondite, but also the more easily perceived. If we grant that the human body and organs are a figure, in little, of the universe, then let us ask the question, “By what is the astral light symbolized?” By the eye, and specially by the retina and its mode of action. On the astral light are received the pictures of all events and things, and on the retina are received the images of objects passing before the man. We find that these images on the retina remain for a specific period, capable of measurement, going through certain changes before fading completely away. Let us extend the result of this observation to the astral light, and we assume that it also goes through similar changes

in respect to the pictures. From this it follows that the mass or totality of pictures made during any cycle must, in this great retina, have a period at the end of which they will have faded away. Such we find is the law as stated by those who know the Secret Doctrine. In order to arrive at the figures with which to represent this period, we have to calculate the proportion thus: as the time of fading from the human retina is to the healthy man’s actual due of life, so is the time of fading from the astral light. The missing term may be discovered by working upon the doctrine of the four yugas or ages and the length of one life of Brahma.

Now these theosophical doctrines which we have been at such pains to elaborate during all the years of our history are either capable of universal application or they are not. If they are not, then they are hardly worth the trouble we have bestowed upon them; and it would then have been much better for us had we devoted ourselves to some special departments of science.

But the great allurements that theosophy holds for those who follow it is that its doctrines are universal, solving all questions and applying to every department of nature so far as we know it. And advanced students declare that the same universal application prevails in regions far beyond the grasp of present science or of the average man’s mind. So that, if a supposed law or application is formulated to us, either by ourselves or by some other person, we are at once able to prove it; for unless it can be applied in every direction—by correspondence, or is found to be one of the phases of some previously-admitted doctrine, we know that it is false doctrine or inaccurately stated. Thus all our doctrines can be proved and checked at every step. It is not necessary for us to have constant communications with the Adepts in order to make sure of our ground; all that we have to do is to see if any position we assume agrees with well-known principles already formulated and understood.

Bearing this in mind, we can confidently proceed to examine the great ideas in which so many of us believe, with a view of seeing how they may be applied in every direction. For if, instead of selfishly considering these laws in their effect upon our miserable selves;-

we ask how they apply everywhere, a means is furnished for the broadening of our horizon and the elimination of selfishness. And when also we apply the doctrines to all our acts and to all parts of the human being, we may begin to wake ourselves up to the real task set before us. <sup>1</sup> Let us look at Karma. It must be applied not only to the man but also to the Cosmos, to the globe upon which he lives. You know that, for the want of an English word, the period of one great day of evolution is called a Manwantara, or the reign of one Manii. These eternally succeed each other. In other words, each one of us is a unit, or a cell, if you please, in the great body or being of Manu, and just as we see ourselves making Karma and reincarnating for the purpose of carrying off Karma, so the great being Manu dies at the end of a Manwantara, and after the period of rest reincarnates once more, the sum total of all that we have made him—or it. And when I say “we,” I mean all the beings on whatever plane or planet who are included in that Manwantara. Therefore this Manwantara is just exactly what the last Manwantara made it, and so the next Manwantara after this—millions of years off—will be the sum or result of this one, plus all that have preceded it.

How much have you thought upon the effect of Karma upon the animals, the plants, the minerals, the elemental beings? Have you been so selfish as to suppose that they are not affected by you? Is it true that man himself has no responsibility upon him for the vast numbers of ferocious and noxious animals, for the deadly serpents and scorpions, the devastating lions and tigers, that make a howling wilderness of some corners of the earth and terrorize the people of India and elsewhere? It cannot be true. But as the Apostle of the Christians said, it is true that the whole of creation waits upon man and groans that he keeps back the enlightenment of all. What happens when, with intention, you crush out the life of a common croton bug? Well, it is destroyed and you forget it. But you brought it to an untimely end, short though its life would have been. Imagine this being done at hundreds of thousands of places in the State. Each of these little creatures had life and energy; each some degree of intelligence. The sum total of the effects of all these deaths of small things must be

appreciable. If not, then our doctrines are wrong and there is no wrong in putting out the life of a human being.

Let us go a little higher, to the bird kingdom and that of four-footed beasts. Every day in the shooting season in England vast quantities of birds are killed for sport, and in other places such intelligent and inoffensive animals as deer. These have a higher intelligence than insects, a wider scope of feeling. Is there no effect under Karma for all these deaths? And what is the difference between wantonly killing a deer and murdering an idiot? Very little to my mind. Why is it, then, that even delicate ladies will enjoy the recital of a bird or deer hunt? It is their Karma that they are the descendants of long generations of Europeans who some centuries ago, with the aid of the church, decided that animals had no souls and therefore could be wantonly slaughtered. The same Karma permits the grandson of the Queen of England who calls herself the defender of the faith—of Jesus—to have great preparations made for his forth-coming visit to India to the end that he shall enjoy several weeks of tiger-hunting, pig-sticking, and the destruction of any and every bird that may fly in his way.

We therefore find ourselves ground down by the Karma of our national stem, so that we are really almost unable to tell what thoughts are the counterfeit presentments of the thoughts of our forefathers, and what self-born in our own minds.

Let us now look at Reincarnation, Devachan, and Karma

It has been the custom of theosophists to think upon these subjects in respect only to the whole man—that is to say, respecting the ego.

But what of its hourly and daily application? If we believe in the doctrine of the One Life, then every cell in these material bodies must be governed by the same laws. Each cell must be *a life* and have its karma, devachan, and reincarnation. Every one of these cells upon incarnating among the others in our frame must be affected by the character of those it meets; and we make that character. Every thought upon reaching its period dies. It is soon reborn, and coming back from its devachan it finds either bad or good companions provided for it. Therefore every hour of life is fraught with danger or with help. How

can it be possible that a few hours a week devoted to theosophic thought and action can counteract—even in the gross material cells—the effect of nearly a whole week spent in indifference, frivolity, or selfishness? This mass of poor or bad thought will form a resistless tide that shall sweep away all your good resolves at the first opportunity.

This will explain why devoted students often fail. They have waited for a particular hour or day to try their strength, and when the hour came they had none. If it was anger they had resolved to conquer, instead of trying to conquer it at an offered opportunity they ran away from the chance so as to escape the trial; or they did not meet the hourly small trials that would, if successfully passed, have given them a great reserve of strength, so that no time of greater trial would have been able to overcome them.

Now as to the theory of the evolution of the macrocosm in its application to the microcosm, man.

The hermetic philosophy held that man is a copy of the greater universe; that he is a little universe in himself, governed by the same laws as the great one, and in the small proportions of a human being showing all those greater laws in operation, only reduced in time or sweep. This is the rule to which H. P. Blavatsky adheres, and which is found running through all the ancient mysteries and initiations.

It is said that our universe is a collection of atoms or molecules—called also “liVes”; living together and through each the spirit struggles to reach consciousness, and that this struggle is governed by a law compelling it to go on in or between periods. In any period of such struggle some of these atoms or collections of molecules are left over, as it were, to renew the battle in the next period, and hence the state of the universe at any time of manifestation—or the state of each newly-manifested universe—must be the result of what was done in the preceding period.

Coming down to the man, we find that he is a collection of molecules or *lives* or cells, each striving with the other, and all affected for either good or bad results by the spiritual aspirations or want of them in the man who is the guide or god, so to say, of his little universe.

When he is born, the molecules or cells or lives that are to compose his physical and astral forms are from that moment under his reign, and during the period of his smaller life they pass through a small manvantara just as the lives in the universe do, and when he dies he leaves them all impressed with the force and color of his thoughts and aspirations, ready to be used in composing the houses of other egos.

Now here is a great responsibility revealed to us of a double character.

The first is for effects produced on and left in what we call matter in the molecules, when they come to be used by other egos, for they must act upon the latter for benefit or the reverse.

The second is for the effect on the molecules themselves in this, that there are lives or entities in all—or rather they are all lives—who are either aided or retarded in their evolution by reason of the proper or improper use man made of this matter that was placed in his charge.

Without stopping to argue about what matter is, it will be sufficient to state that it is held to be co-eternal with what is called “spirit”. That is, as it is put in the *Bhagavad Gita*: “He who is spirit is also matter.” Or, in other words, spirit is the opposite pole to matter of the Absolute. But of course this matter we speak of is not what we see about us, for the latter is only in fact phenomena of matter: even science holds that we do not really see matter.

Now during a manvantara or period of manifestation, the egos incarnating must use over and over again in any world upon which they are incarnating the matter that belongs to it.

So, therefore, we are now using in our incarnations matter that has been used by ourselves and other egos over and over again, and are affected by the various tendencies impressed in it. And, similarly, we are leaving behind us for future races that which will help or embarrass them in their future lives.

This is a highly important matter, whether reincarnation be a true doctrine or not. For if each new nation is only a mass of new egos or souls, it must be much affected • by the matter-environment left behind by nations and races that have disappeared forever.

But for us who believe in reincarnation it has additional force, showing us one strong reason why universal brotherhood should be believed in and practised.

The other branch of the responsibility is just as serious. The doctrine that removes death from the universe and declares that all is composed of innumerable lives, constantly changing places with each other, contains in it of necessity the theory that man himself is full of these lives and that all are traveling up the long road of evolution.

The secret doctrine holds that we are full of kingdoms of entities who depend upon us, so to say, for salvation.

How enormous, then, is this responsibility, that we not only are to be judged for what we do with ourselves as a whole, but also for what we do for those unseen beings who are dependent upon us for light.

W.Q.J.

*Path, October, 1889*

### WHICH IS VAGUE, THEOSOPHY OR SCIENCE?

IT is commonly charged against the exponents of Theosophy that they deal in vague generalities only. A lecture is given or paper read by a Theosophist, and the profane hearer laughs, saying, "All this is metaphysical absurdity; these are mere abstractions; let us have something like that which science gives us, something we can grasp."

A great many persons imagine, knowing but little in reality about science, that it is sure, certain, and fixed in the vital premises which underlie the practical outcome seen in many branches of life's activity. Why is this so? An inquiry into the question discloses the fact that some, if not all, the basic postulates of science are the purest abstractions, and that many statements from which deductions of fact are drawn are themselves the merest hypotheses. We will also find that the commonest of people unconsciously use in every work-a-day acts the most abstract and indefinite premises without which they could do but little.

Take navigation of the ocean, by which we are able to send the largest ships carrying the richest of cargoes from shore to shore of any sea. These are guided in their course by men who know little or nothing of Theosophy and who would laugh at metaphysics. But in order to safely carry the ship from departure to destination, they have to use the lines of longitude and latitude, which, while seeming very real to them, have no existence whatever, except in theory. These lines must be used, and, if not, the ship will strike a rock or run upon the shore. Where are the parallels of longitude and latitude? They are imagined to be on the earth, but their only visible existence is upon the chart made by man, and their real existence is in the mind of the

astronomer and those who understand the science of navigation. The sea captain may think they are on the chart, or he may not think of it at all. Where do they stop? Nowhere; they are said to extend indefinitely into space; yet these abstractions are used for present human commercial needs. Is this any less vague than Theosophy?

In the latter we have to guide the great human ship from shore to shore, and in that immense journey are obliged to refer to abstractions from which to start. Our spiritual parallels of latitude and longitude are abstractions, indeed, but no more so than those laid down upon the seaman's chart. The scientific materialist says: "What nonsense to speak of coming out of the Absolute!" We may reply, "What nonsense for the mariner to attempt to guide his ship by that which has no existence whatever, except in fancy; by that which is a pure abstraction!" Again he laughs at us for assuming that there is such a thing as the soul, "for," he says, "no man has ever seen it, and none ever can; it cannot be demonstrated." With perfect truth we can reply: "Where is the atom of science; who has ever seen it; where and when has its existence been demonstrated?" The "atom" of science is today as great a mystery as the "soul" of Theosophy. It is a pure hypothesis, undemonstrated and un-demonstrable. It can neither be weighed, nor measured, nor found with a microscope; indeed, in the opinion of many Theosophists it is a far greater mystery than the soul, because some say they have seen that which may be soul; which looks like it; and no man has been, at any time, so fortunate or unfortunate as to have seen an atom.

Further, the scientific materialist says, "What do you know about the powers of the soul, which you say is the central sun of the human system?" And we answer that "it is no more indefinite for us than the sun is for the astronomers who attempt to measure its heat and estimate its distance. As to the heat of the sun, not all are agreed that it has any heat whatever, for some learned men think that it is a source of an energy which creates heat when it reaches the earth's atmosphere only.

Others, celebrated in the records of science, such as Newton, Fizeau, and many other well-known astronomers, disagree as to the

quantity of heat thrown out by the sun, on the hypothesis that it has any heat, and that difference is so great as to reach 8,998,600 degrees. Thus as to the central sun of this system, there is the greatest vagueness in science and no agreement as to what may be the truth in this important matter. In Theosophy, however, on the other hand, although there is some vagueness with mere students as to the exact quantity of heat or light thrown out by the soul, those who have devoted more time to its study are able to give closer estimates than any which have been given by scientific men in respect to the sun of the solar system. Yet all these generalities of science are the very things that have led to the present wonderful material development of the nineteenth century.

But let us glance for a moment at the subject of evolution, which engages the thought of materialist and theosophist alike; let us see if theosophy is more vague than its opponents, or more insane, we might say, in ability to lay wild theories before intelligent men. The well-known Haeckel in his *Pedigree of Man* says, in speaking of Darwin's teachings and lauding them: "Darwin puts in the place of a conscious creative force, building and arranging the organic bodies of animals and plants on a designed plan, a *series of natural forces working blindly*, or we say, *without aim, without design*. In place of an arbitrary act we have a necessary law of evolution. ... A *mechanical origin of the earliest living form* was held as the necessary sequence of Darwin's teaching." Here we have blind, undesigning forces, beginning work without design, haphazard, all being jumbled together, but finally working out into a beautiful design visible in the smallest form we can see. There is not a single proof in present life whether mineral, vegetable, or animal, that such a result from such a beginning could by any possibility eventuate. But these scientific men in those matters are safe in making hypotheses, because the time is far in the dark of history when these *blind*, undesigning acts were begun. Yet they ought to show some present instances of similar blindness producing harmonious designs. Now is this not a wild, fanciful, and almost insane statement of Haeckel's? Is it not ten times more absurd than theosophical teachings? We begin truly with Parabrahmam and

Mulaprakriti and Hosts of Dhyan Chohans, but we allege design in everything, and our Parabrahmam is no more vague than motion or force, pets of science.

So I have found that a slight examination of this question reveals science as more vague than Theosophy is in anything. But some may say results are not indefinite. The same is said by us, the results to be reached by following the doctrines of theosophy, relating, as they do, to our real life, will be as definite, as visible, as important as any that science can point to.

## THE SYNTHESIS OF OCCULT SCIENCE

### I

**T**HE impassable gulf between mind and matter discovered by modern science is a logical result of the present methods of so-called scientific investigation. These methods are analytical and hypothetical, and the results arrived at are necessarily tentative and incomplete. Even the so-called “Synthetic Philosophy” of Spencer is, at best, an effort to grasp **the** entire method and modulus of nature within one of its processes only. The aim is at synthesis, but it can hardly deserve the name of philosophy, for it is purely speculative and hypothetical. It is as though the physiologist undertook to study **the** function of respiration in man through the single process of expiration, ignoring the fact that every expiratory act must be supplemented by inspiration or respiration cease altogether.

Taking, therefore, the facts of experience derived from the phenomena of nature and viewing both cosmic and organic processes purely from their objective side, the “missing links,” “impassable gulfs,” and “unthinkable gaps” occur constantly. Not so in Occult Science. So far as the science of occultism is concerned, it is both experimental and analytical, but it acknowledges no “missing links,” “impassable gulfs,” or “unthinkable gaps,” because it finds none. Back of occult science there lies a complete and all-embracing Philosophy. This philosophy is not simply synthetical in its methods, for the simplest as the wildest hypothesis can claim that much; but it is *synthesis Itself*. It regards Nature as one complete whole, and so the student of occultism may stand at either **point** of observation. He may from the stand-point of Nature’s wholeness and completeness follow the process of segregation and differentiation to the minutest atom conditioned in space and time; or, from the phenomenal display of the

atom, he may reach forward and upward till the atom becomes an integral part of cosmos, involved in the universal harmony of creation. The modern scientist may do this incidentally or empirically, but the occultist does it systematically and habitually, and hence philosophically. The modern scientist is confessedly and boastfully *agnostic*. The occultist is reverently and progressively *gnostic*.

Modern science recognizes matter as “living” and “dead,” “organic” and “inorganic,” and “Life” as merely a phenomenon of matter. Occult science recognizes, “foremost of all, the postulate that there is no such thing in Nature as *inorganic* substances or bodies. Stones, minerals, rocks, and even chemical ‘atoms’ are simply organic units in profound lethargy. Their coma has an end, and their inertia becomes activity.” (*Secret Doctrine*, Vol. I, p. 626 fn.) Occultism recognizes ONE UNIVERSAL, ALL-PERVADING LIFE. Modern science recognizes life as a special phenomenon of matter, a mere transient manifestation due to temporary conditions. Even logic and analogy ought to have taught us better, for the simple reason that so-called “inorganic” or “dead” matter constantly becomes organic and living, while matter from the organic plane is continually being reduced to the inorganic. How rational and justifiable, then, to suppose that the capacity or “potency” of life is latent in all matter!

The “elements,” “atoms,” and “molecules” of modern science, partly physical and partly metaphysical, though altogether hypothetical, are, nevertheless, seldom philosophical, for the simple reason that they are regarded solely as phenomenal. The Law of Avogadro involved a generalization as to physical structure and number, and the later experiments of Prof. Neumann deduced the same law mathematically from the first principles of the mechanical theory of gases, but it remained for Prof. Crookes to perceive the philosophical necessity of a primordial substratum, *protyle*, and so, as pointed out in the *Secret Doctrine*, to lay the foundations of “*Meto-chemistry*”; in other words, a complete philosophy of physics and chemistry that shall take the place of mere hypothesis and empiricism. If one or two generalizations deduced as logical or mathematical necessities from the phenomena of physics and chemistry have been

able to work such revolutions in the old chemistry, what may we not expect from a complete synthesis that shall grasp universals by a law that compasses the whole domain of matter? And yet this complete synthesis has been in the possession of the true occultist for ages. Glimpses of this philosophy have been sufficient to give to minds like Kepler, Descartes, Leibnitz, Kant, Schopenhauer, and, lastly, to Prof. Crookes, ideas that claimed and held the interested attention of the scientific world. While, at certain points, such writers supplement and corroborate each other, neither anywhere nor altogether do they reveal the complete synthesis, for none of them possessed it, and yet it has all along existed.

“Let the reader remember these ‘Monads’ of Leibnitz, every one of which is a living mirror of the universe, every monad reflecting every other, and compare this view and definition with certain Sanskrit stanzas (*Slokas*) translated by Sir William Jones, in which it is said that the creative source of the Divine Mind, . . . ‘Hidden in a veil of thick darkness, formed *mirrors of the atoms* of the world, and *cast reflection from its own face on every atom*’.”—*S.D.*, Vol. I, p. 623.

It may be humiliating to “Modern Exact Science” and repugnant to the whole of Christendom to have to admit that the Pagans whom they have despised, and the “Heathen Scriptures” they long ridiculed or ignored, nevertheless possess a fund of wisdom never dreamed of under Western skies. They have the lesson, however, to learn, that Science by no means originated in, nor is it confined to, the West, nor are superstition and ignorance confined to the East.

It can easily be shown that every real discovery and every important advancement in modern science have already been anticipated centuries ago by ancient science and philosophy. It is true that these ancient doctrines have been embodied in unknown languages and symbols, and recorded in books inaccessible to western minds till a very recent date. Far beyond all this inaccessibility, however, as a cause preventing these old truths from reaching modern times, has been the prejudice, the scorn and contempt of ancient learning manifested by the leaders of modern thought.

Nor is the lesson yet learned that bigotry and scorn are never the mark of wisdom or the harbingers of learning; for still, with comparatively few exceptions, any claim or discussion of these *ancient* doctrines is met with contempt and scorn. The record has, however, been at least outlined and presented to the world. As the authors of the Secret Doctrine have remarked, these doctrines may not be largely accepted by the present generation, but during the twentieth century they will become known and appreciated.

The scope and bearing of philosophy itself are hardly yet appreciated by modern thought, because of its materialistic tendency. A complete science of metaphysics and a complete philosophy of science are not yet even conceived of as possible; hence the ancient wisdom by its very vastness has escaped recognition in modern times. That the authors of ancient wisdom have spoken from at least two whole planes of conscious experience beyond that of our every-day "sense-perception" is to us inconceivable, and yet such is the fact; and why should the modern advocate of evolution be shocked and staggered by such a disclosure? It but justifies his hypothesis and extends its theatre. Is it because the present custodians of this ancient learning do not scramble for recognition on the stock exchange, and enter into competition in the marts of the world? If the practical outcome of such competition needed illustration, Mr. Keely might serve as an example. The discoveries of the age are already whole centuries in advance of its ethical culture, and the knowledge that should place still further power in the hands of a few individuals whose ethical code is below, rather than above, that of the ignorant, toiling, suffering masses, could only minister to anarchy and increase oppression. On these higher planes of consciousness the law of progress is absolute; knowledge and power go hand in hand with beneficence to man, not alone to the individual possessors of wisdom, but to the whole human race. The custodians of the higher knowledge are equally by both motive and development almoners of the divine. These are the very conditions of the higher consciousness referred to. The synthesis of occult science becomes, therefore, the higher synthesis of the faculties of man. What matter, therefore, if the ignorant

shall scout its very existence, or treat it with ridicule and contempt? Those who know of its existence and who have learned something of its scope and nature can, in their turn, afford to smile, but with pity and sorrow at the willing bondage to ignorance and misery that scorns enlightenment and closes its eyes to the plainest truths of experience.

Leaving, for the present, the field of physics and cosmo-genesis, it may be profitable to consider some of the applications of these doctrines to the functions and life of man.

The intellect derived from philosophy  
is similar to a charioteer; for it  
is present with our desires, and  
always conducts them to the beautiful.

—DEMOPHILUS

## II

"In reality, as Occult philosophy teaches us, everything which changes is organic; it has the life principle in it, and it has all the potentiality of the higher lives. If, as we say, all in nature is an aspect of the one element, and life is universal, how can there be such a thing as an inorganic atom!"<sup>1</sup> Man is a perfected animal, but before he could have reached perfection even on the animal plane, there must have dawned upon him the light of a higher plane. Only the perfected animal can cross the threshold of the next higher, or the human plane, and as he does so there shines upon him the ray from the supra-human plane. Therefore, as the dawn of humanity illumines the animal plane, and as a guiding star lures the Monad to higher consciousness, so the dawn of divinity illumines the

human plane, luring the monad to the supra-human plane of consciousness. This is neither more nor less than the philosophical and metaphysical aspect of the law of evolution. Man has not one principle more than the tiniest insect; he is, however, "the vehicle of a fully developed *Monad*, self-conscious and deliberately following its own line of progress, whereas in the insect, and even the higher animal, the higher triad of principles is absolutely dormant." The original *Monad*

<sup>1</sup>Quotations are from the *Secret Doctrine* and other writings of H.P. Blavatsky.

has, therefore, locked within it the potentiality of divinity. It is plainly, therefore, a misnomer to call that process of thought a “Synthetic Philosophy” that deals only with phenomena and ends with matter on the physical plane. These two generalizations of Occult philosophy, endowing every atom with the potentiality of life, and regarding every insect or animal as already possessing the potentialities of the higher planes though these powers are yet dormant, add to the ordinary Spencerian theory of evolution precisely that element that it lacks, Wz. the metaphysical and philosophical; and, thus endowed, the theory becomes synthetical.

The *Monad*, then, is essentially and potentially the same in the lowest vegetable organism, up through all forms and gradations of animal life to man, *and beyond*. There is a gradual unfolding of its potentialities from “Monera” to man, and there are two whole planes of consciousness, the sixth and the seventh “senses,” not yet unfolded to the average humanity. Every monad that is enclosed in a form, and hence limited by matter, becomes conscious on its own plane and in its own degree. Consciousness, therefore, no less than sensitiveness, belongs to plants as well as to animals. Self-consciousness belongs to man, because, while embodied in a *form*, the higher triad of principles, Atma-Buddhi-Manas, is no longer dormant, but active. This activity is, however, far from being fully developed. When this activity has become fully developed, man will already have become conscious on a still higher plane, endowed with the sixth and the opening of the *seventh* sense, and will have become a “god” in the sense given to that term by Plato and his followers.

In thus giving this larger and completer meaning to the law of evolution, the Occult philosophy entirely eliminates the “missing links” of modern science, and, by giving to man a glimpse of his nature and destiny, not only points out the line of the higher evolution, but puts him in possession of the means of achieving it.

The “atoms” and “monads” of the Secret Doctrine are very different from the atoms and molecules of modern science. To the latter these are mere particles of matter endowed with blind force: to the former, they are the “dark nucleoles,” and potentially “Gods,”

conscious and intelligent from their primeval embodiment at the beginning of differentiation in the dawn of the Manvantara. There are no longer any hard and fast lines between the “organic” and the “inorganic”; between the “living” and “dead” matter. Every atom is endowed with and moved by intelligence, and is conscious in its own degree, on its own plane of development. This is a glimpse of the *One Life* that—

Runs through all time, extends through all extent, Lives undivided,  
operates unspent.

It may be conceived that the “Ego” in man is a monad that has gathered to itself innumerable experiences through aeons of time, slowly unfolding its latent potencies through plane after plane of matter. It is hence called the “*eternal pilgrim*.”

The *Manasic*, or mind principle, is cosmic and universal. It is the creator of all forms, and the basis of all law in nature. Not so with consciousness. Consciousness is a condition of the monad as the result of embodiment in matter and the dwelling in a physical form. Self-consciousness, which from the animal plane looking upward is the beginning of perfection, from the divine plane looking downward is the perfection of selfishness and the curse of separateness. It is the “world of illusion” that man has created for himself. “Maya is the perceptive faculty of every Ego which considers itself a Unit, separate from and independent of the One Infinite and Eternal Sat or ‘beingness’.” The “eternal pilgrim” must therefore mount higher, and flee from the plane of self-consciousness it has struggled so hard to reach.

The complex structure that we call “Man” is made up of a congeries of almost innumerable “Lives.” Not only every microscopic cell of which the tissues are composed, but the molecules and atoms of which these cells are composed, are permeated with the essence of the “One Life.” Every so-called organic cell is known to have its nucleus, a center of finer or more sensitive matter. The nutritive, all the formative and functional processes consist of flux and re-flux, of inspiration and expiration, to and from the nucleus.

The nucleus is therefore in its own degree and after its kind a “monad” imprisoned in a “form.” Every microscopic cell, therefore,

has a consciousness and an intelligence of its own, and man thus consists of innumerable “lives.” This is but physiological synthesis, logically deduced no less from the known facts in physiology and histology than the logical sequence of the philosophy of occultism. Health of the body as a whole depends on the integrity of all its parts, and more especially upon their harmonious association and cooperation. A diseased tissue is one in which a group of individual cells refuse to cooperate, and wherein is set up discordant action, using less or claiming more than their due share of food or energy. Disease of the very tissue of man’s body is neither more nor less than the “sin of separateness.” Moreover, the grouping of cells is upon the principle of hierarchies. Smaller groups are subordinate to larger congeries, and these again are subordinate to larger, or to the whole. Every microscopic cell therefore typifies and epitomizes man, as man is an epitome of the Universe. As already remarked, the “Eternal Pilgrim,” the Alter-Ego in man, is a monad progressing through the ages. By right and by endowment the ego is king in the domain of man’s bodily life. It descended into matter in the cosmic process till it reached the mineral plane, and then journeyed upward through the “three kingdoms” till it reached the human plane. The elements of its being, like the cells and molecules of man’s body, are groupings of structures accessory or subordinate to it. The human monad or Ego is therefore akin to all below it and heir to all above it, linked by indissoluble bonds to spirit and matter, “God” and “Nature.” The attributes that it gathers, and the faculties that it unfolds, are but the latent and dormant potentialities awaking to conscious life. The tissue cells constitute man’s bodily structure, but the order in which they are arranged, the principle upon which they are grouped, constituting the human *form*, is not simply an evolved shape from the lower animal plane, but an *involved* principle from a higher plane, an older world, *viz.* the “Lunar Pitris.” “Hanuman the Monkey” antedates Darwin’s “missing link” by thousands of millenniums. So also the *Manasic*, or mind element, with its cosmic and infinite potentialities, is not merely the developed “instinct” of the animal. *Mind* is the latent or active potentiality of *Cosmic ideation*, the essence of every form, the basis of every law, the potency of every principle in the universe. Human

thought is the reflection or reproduction in the realm of man’s consciousness of these forms, laws, and principles. Hence man senses and apprehends nature just as nature unfolds in him. When, therefore, the Monad has passed through the form of the animal ego, involved and unfolded the human form, the higher triad of principles awakens from the sleep of ages and over-shadowed by the “Manasa-putra” and *built into* its essence and substance. How could man epitomize Cosmos if he did not touch it at every point and involve it in every principle? If man’s being is woven in the web of destiny, his potencies and possibilities take hold of divinity as the woof and pattern of his boundless life. Why, then, should he grow weary or disheartened? Alas! why should he be degraded, this heir of all things!

The peculiarity also of this theology, and in which its transcendency consists, is this, that it does not consider the highest God to be the principle of beings, but the *principle of principles*, i.e. of deiform processions from itself, all which are eternally rooted in the unfathomable depths of the immensely great source of their existence, and of which they may be called supersensuous ramifications and superluminous blossoms.

—Thomas Taylor, Introduction to *Mystical Hymns of Orpheus*

### III

It has often been a strange thing that there are no dogmas and no creed in Theosophy or Occultism. Is theosophy a religion? is often asked. No, it is *religion*. Is it a philosophy? No, it is *philosophy*. Is it a science? No, it is *science*. If a consensus of religion, philosophy, and science is possible, and if it has ever been reached in human thought, that thought must long since have passed the boundaries of all creeds and ceased to dogmatize. Hence comes the difficulty in answering questions. No proposition stands apart or can be taken separately without limiting and often distorting its meaning. Every proposition has to be considered and held as subservient to the synthetic whole. Really intelligent people, capable of correct reasoning, often lack sufficient interest to endeavor to apprehend the universality of these principles. They expect, where they have any interest at all in the subject, to be told “all about it” in an hour’s conversation, or to learn it from a column in some newspaper; all about man, all about Nature, all about Deity; and then either to reject it or to make it a part

of their previous creed. These are really no wiser than the penny-a-liner who catches some point and turns it into ridicule, or makes it a butt for coarse jest or silly sarcasm, and then complacently imagines that he has demolished the whole structure! If such persons were for one moment placed face to face with their own folly, they would be amazed. The most profound thinker and the most correct reasoner might well afford to devote a life-time to the apprehension of the philosophy of occultism, and other life-times to mastering the scientific details, while at the same time his ethics and his religious life are made consistent with the principle of altruism and the Brotherhood of man. If this be regarded as too hard a task, it is, nevertheless, the line of the higher evolution of man, and, soon or late, every soul must follow it, retrograde, or cease to be.

Man is but a link in an endless chain of being; a sequence of a past eternity of causes and processes; a potentiality born into time, but spanning two eternities, his past and his future, and in his consciousness these are all one, *Duration*, the *ever-present*. In a former article man was shown to be a series of almost innumerable "Lives," and these lives, these living entities called "cells," were shown to be associated together on the principle of hierarchies, grouped according to rank and order, service and development, and this was shown to be the "physical synthesis" of man, and the organic synthesis as well. Disease was also shown to be the organic nutritive, or physiological "sin of separateness." Every department of man's being, every organ and cell of his body, was also shown to possess a consciousness and an intelligence of its own, held, however, subordinate to the whole. In health every action is synchronous and rhythmical, however varied and expanded, however intense and comprehensive. Enough is already known in modern physics to justify all these statements, at least by analogy. The principle of electrical induction and vibration, the quantitative and qualitative transmission of vibration and its exact registration, and their application to telegraphy, the telephone, and the phonograph, have upset all previous theories of physics and physiology. "A metallic plate, for instance, can that talk like a human being? Yea or nay? Mr. Bouillard—and he was no

common man—said No; to accept such a fact were to upset all our notions of physiology. So said Mr. Bouillard, right in the face of Edison's phonograph in full Academy, and he throttled the luckless interpreter of the famous American inventor, accusing it of ventriloquism."<sup>1</sup>

Occultism teaches that the Ego both precedes and survives the physical body. The phenomena of man's life and the process of his thought can be apprehended and explained on no other theory. Modern physiology teaches in detail certain facts regarding the life of man. It, moreover, groups these facts and deduces certain so-called principles and laws, but such a thing as a synthesis of the *whole man* is seldom even attempted. "Psychology" is mere empiricism, represented by disjointed facts, and these, of course, but little understood, and more often misinterpreted. <sup>1</sup> Dr. J. Oehorowicz, "Mental Suggestion," p. 291.

Ask the modern physiologist if man can *think* when unconscious, and he will answer No; and if asked if man can be conscious and not think, he will as readily answer No. Both answers will be based on what is known, or supposed to be known, of memory. The idea that the real man, the Ego, is always conscious on some plane, and that it "thinks", as we ordinarily use the term, only on the lower plane through the physical brain, in terms of extension and duration, or space and time, is seldom in the least apprehended by the modern physiologist. If, however, one grasps the idea of the ego as the real man dwelling in the physical body and using it as its instrument through which it is related to space and time, perception, sensation, thought, and feeling, the gaps in physiology and psychology begin to disappear. Here again it should be particularly borne in mind that this doctrine of the ego must be considered in the light of the complete synthesis of occultism, and just to the extent that this is intelligently done will the significance of the ego appear.

The brief and concise outline of the philosophy of occultism given in the Introduction to the *Secret Doctrine* is therefore very significant, and the student who desires to apprehend that which follows in these two large volumes ought to study this outline very carefully. No

<sup>1</sup>Dr. J. Oehorowicz, "Mental Suggestion," p. 291.

subsequent proposition, no principle in the life of man, can be correctly understood apart from it. The subject-matter following is necessarily fragmentary, but the outline is both inclusive and philosophical, and if one reasons logically and follows the plainest analogies he can never go far astray. The relation of mind to brain, of thought to consciousness, of life to matter, and of man to Nature and to Deity, is there clearly defined; not, indeed, in all its details, but in a philosophical modulus, to be worked out in reason and in life. The all-pervading Life, the cyclic or periodical movements, the periods of action and of repose, and the intimate relations and inter-dependences of all things apply to Cosmos, and equally to every atom in its vast embrace.

Students sometimes complain that they cannot understand, that the subject is so vast, and so deep and intricate, and not made clear. It is because they do not realize what they have undertaken. Occultism can neither be taught nor learned in “a few easy lessons.” The “object lessons” sometimes given by H.P.B., almost always misunderstood and misapplied, though often explained at the time, served as often to excite vulgar curiosity and personal abuse as to arrest attention and study. If, before the advent of the T.S. in the face of the creeds of Christendom, the materialism of science, the indifferences and supercilious scorn of Agnosticism, and the babel of spiritualism, it had been proposed to begin at the foundations and reconstruct our entire knowledge of Nature and of man; to show the unity and the foundations of the world’s religions; to eliminate from science all its “missing links”; to make Agnosticism gnostic; and to place the science of psychology and the nature and laws of mind and soul over against “Mediumship”; it would have been held as an herculean task, and declared impossible of accomplishment. Now that the thing has virtually been accomplished and this body of knowledge presented to the world, people think it strange that they cannot compass it all, as the poet Burns is said to have written some of his shorter poems, “while standing on one leg!”

Again, people complain at the unfamiliar terms and the strange words imported from foreign languages. Yet if one were to undertake the study of physics, chemistry, music, or medicine, quite as great obstacles have to be overcome. Is it a strange thing, then, that the science that includes all these, and undertakes to give a synthesis of

the whole realm of Nature and of life, should have its own nomenclature?

Beyond all these necessary and natural obstacles, there is another, *viz.*, that contentious spirit that disputes and opposes every point before it is fairly stated or understood. Suppose one ignorant of mathematics were to proceed in the same manner and say, “I don’t *like* that proposition,” “I don’t see *why* they turn a six upside down to make a nine,” “Why don’t two and two make five?”, and so on, how long would it take such a one to learn mathematics? In the study of the Secret Doctrine it is not a matter of likes or dislikes, of belief or unbelief, but solely a matter of intelligence and understanding. He who acknowledges his ignorance and yet is unwilling to lay aside his likes and dislikes, and even his creeds and dogmas, for the time, in order to see what is presented in its own light and purely on its merits, has neither need nor use for the Secret Doctrine. Even where a greater number of propositions are accepted or “believed” and a few are rejected, the synthetic whole is entirely lost sight of. But, says some one, this is a plea for blind credulity, and an attempt to bind the mind and the conscience of man to a blind acceptance of these doctrines. No one but the ignorant or the dishonest can make such an assertion in the face of the facts. Listen to the following from p. xix, Introduction to the *Secret Doctrine*. “It is above everything important to keep in mind that no theosophical book acquires the least additional value from pretended authority.” If that be advocating blind credulity, let the enemies of the T.S. make the most of it. If any authority pertains to the *Secret Doctrine*, it must be sought inside, not outside. It must rest on its comprehensiveness, its completeness, its continuity and reasonableness; in other words, on its *philosophical synthesis*, a thing missed alike by the superficial and the contentious, by the indolent, the superstitious, and the dogmatic.

O wise man: you have asked rightly. Now listen carefully. The illusive fancies arising from error are not conclusive.

The great and peaceful ones live regenerating the world like the coming of spring, and after having themselves crossed the ocean of embodied existence, help those who try to do the same thing, without personal motives.

## IV

In the foregoing articles, necessarily brief and fragmentary, a few points have been given to show the general bearing of the *Secret Doctrine* on all problems in Nature and in Life.

Synthesis is the very essence of philosophy—"the combination of separate elements of thought into a whole"—the opposite of analysis, and analysis is the very essence of science.

In the "Outline of the Secret Doctrine" by "C.J.," now running through the pages of *Lucifer*, this philosophy or synthesis of the whole is made very clear.

There have been many *philosophizers* in modern times, but there can be but one philosophy, one synthesis of the *whole* of Eternal Nature. With the single exception of the writings of Plato, no one in modern times had given to the Western world any approximation to a complete philosophy, previous to the appearance of H. P. Blavatsky's *Secret Doctrine*. The writings of Plato are carefully veiled in the symbolical language of initiation. The *Secret Doctrine*, coming more than two millenniums later, and in an age of so-called Science, is addressed to the Scientific thought of the age, and hence considers the whole subject largely from the stand-point of Science. The present age is as deficient in philosophy as was the age of Plato in knowledge of science. It follows, therefore, that while the Secret Doctrine itself apprehends equally both philosophy and science, in addressing itself to the thought of an age it must recognize here, as it does everywhere, the *law of cycles* that rules in the intellectual development of a race no less than in the revolutions of suns and worlds, and so address the times from that plane of thought that is in the ascendant. It is just because analytical thought is in the ascendant, because it is the *thought-form* of the age, that the great majority of readers are likely to overlook the broad synthesis and so miss the philosophy of the Secret Doctrine. The only object of these brief and fragmentary papers has been to call attention to this point.

We are now in a transition period, and in the approaching twentieth century there will be a revival of genuine philosophy, and the Secret

Doctrine will be the basis of the "New Philosophy." Science today, in the persons of such advanced students as Keely, Crookes, Lodge, Richardson, and many others, already treads so close to the borders of occult philosophy that it will not be possible to prevent the new age from entering the occult realm. H. P. Blavatsky's *Secret Doctrine* is a storehouse of scientific facts, but this is not its chief value. These facts are placed, approximately at least, in such relation to the synthesis or philosophy of occultism as to render comparatively easy the task of the student who is in search of real knowledge, and to further his progress beyond all preconception, provided he is teachable, in earnest, and intelligent. Nowhere else in English literature is the Law of Evolution given such sweep and swing. It reminds one of the ceaseless under-tone of the deep sea, and seems to view our Earth in all its changes "from the birth of time to the crack of doom." It follows man in his triple evolution, physical, mental, and spiritual, throughout the perfect circle of his boundless life. Darwinism had reached its limits and a rebound. Man is indeed evolved from lower forms. But *which* man? the physical? the psychological? the intellectual? or the spiritual? The Secret Doctrine points where the lines of evolution and involution meet; where matter and spirit clasp hands; and where the rising animal stands face to face with the fallen god; for *all natures* meet and mingle in man.

Judge no proposition of the Secret Doctrine as though it stood alone, for not one stands alone. Not "independence" here more than with the units that constitute Humanity. It is *interdependence* everywhere; in nature, as in life.

Even members of the T.S. have often wondered why H.P.B. and others well known in the Society lay so much stress on doctrines like Karma and Reincarnation. It is not alone because these doctrines are easily apprehended and beneficent to individuals, not only because they furnish, as they necessarily do, a solid foundation for ethics, or all human conduct, but because they are the very key-notes of the higher evolution of man. Without Karma and Reincarnation evolution is but a fragment; a process whose beginnings are unknown, and whose outcome cannot be discerned; a glimpse of what might be; a

hope of what should be. But in the light of Karma and Reincarnation evolution becomes the logic of what *must* be. The links in the chain of being are all filled in, and the circles of reason and of life are complete. Karma gives the eternal law of action, and Reincarnation furnishes the boundless field for its display. Thousands of persons can understand these two principles, apply them as a basis of conduct, and weave them into the fabric of their lives, who may not be able to grasp the complete synthesis of that endless evolution of which these doctrines form so important a part. In thus affording even the superficial thinker and the weak or illogical reasoner a perfect basis for ethics and an unerring guide in life, Theosophy is building toward the future realization of the Universal Brotherhood and the higher evolution of man. But few in this generation realize the work that is thus undertaken, or how much has already been accomplished. The obscurity of the present age in regard to genuine philosophical thought is nowhere more apparent than in the manner in which opposition has been waged toward these doctrines of Karma and Reincarnation. In the seventeen years since the Theosophical movement has been before the world there has not appeared, from any source, a serious and logical attempt to discredit these doctrines from a philosophical basis. There have been denial, ridicule, and denunciation *ad nauseum*. There could be no discussion from such a basis, for from the very beginning these doctrines have been put forth and advocated from the logical and dispassionate plane of philosophy. Ridicule is both unanswerable and unworthy of answer. It is not the argument, but the atmosphere of weak minds, born of prejudice and ignorance.

The synthesis of occultism is therefore the philosophy of Nature and of Life; the full—or free—truth that apprehends every scientific fact in the light of the unerring processes of Eternal Nature.

The time must presently come when the really advanced thinkers of the age will be compelled to lay by their indifference, and their scorn and conceit, and follow the lines of philosophical investigation laid down in the *Secret Doctrine*. Very few seem yet to have realized how ample are these resources, because it involves a process of thought almost unknown to the present age of empiricism and induction. It is

a revelation from archaic ages, indestructible and eternal, yet capable of being obscured and lost; capable of being again and again reborn, or like man himself—reincarnated.

“He who lives in one color of the rainbow is blind to the rest. Live in the Light diffused through the entire arc, and you will know it all.”—The *Path*.

“He who knows not the common things of life is a beast among men. He who knows only the common things of life is a man among beasts. He who knows all that can be learned by diligent inquiry is a god among men.”—*Plato*.
